1 Balance

1.1 Merchant

	N	Mean	Median	Balance (<i>p</i>)	
				Treat	TypeTreat
Male (0/1)	1192	1.0	1.0	.	.
Age (years)	1192	34.1	32.0	0.25	0.22
Years of education	1192	8.4	10.0	0.27	0.25
Sector: food (0/1)	1192	0.3	0.0	0.74	0.92
Sector: garments (0/1)	1192	0.2	0.0	0.80	0.96
Sector: electronics (0/1)	1192	0.2	0.0	0.50	0.74
Business has a smartphone (0/1)	1192	0.9	1.0	0.13	0.31
Business has regular internet access (0/1)	1192	0.7	1.0	0.38	0.24
Business records are kept (0/1)	1192	0.3	0.0	0.14	0.15
Business requires loose change daily (0/1)	1192	0.7	1.0	0.27	0.16
Prior negative digital exp. (0/1)	1192	0.1	0.0	0.48	0.58
Values digital payments (0/1)	1192	0.7	1.0	0.70	0.38
Believes customers prefer cash (0/1)	1192	0.8	1.0	0.54	0.92
Higher-tax concern (0/1)	1192	0.7	1.0	0.99	0.83
Misperception wedge	1192	-28.9	-30.0	0.40	0.27
Under-estimator (0/1)	1192	0.8	1.0	0.75	0.26

Notes: Variables are measured at listing or baseline. Values digital payments = reports that digital payments add value to the business. Prior negative digital exp. = has experienced fraud with digital payments. Believes customers prefer cash = Does not use digital because they believe customer would prefer cash. Higher-tax concern = believes digital transactions increase tax exposure. Misperception wedge = merchant's guess of the share of local customers who value digital payments minus the actual share from the listing exercise, in percentage points. Under-estimator = 1 if the wedge is negative. Treat reports the *p*-value from a regression of the covariate on pooled treatment assignment; TypeTreat reports the *p*-value from a joint test of the three arm indicators. Standard errors clustered at the market level. The gender test cannot be computed because all interviewed merchants are male. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.

1.2 Household

	N	Mean	Median	Balance (p)	
				Treat	TypeTreat
Male (0/1)	1189	0.5	0.0	0.04**	0.17
Age (years)	1078	34.9	34.0	0.65	0.09*
Years of education	1078	9.1	10.0	0.21	0.45
Household size	1078	6.2	6.0	0.04**	0.20
Has a smart phone (0/1)	1189	0.8	1.0	0.49	0.45
Market visit (daily; 0/1)	1189	0.7	1.0	0.39	0.66
Misperception wedge	1119	-44.9	-50.0	0.16	0.54
Under-estimator (0/1)	1119	0.9	1.0	0.12	0.37

Notes: Gender, smartphone access, market visit, and belief variables are measured at listing or the treatment phone call; age, education, and household size were collected at follow-up (N = 1,078). Market visit = household members visit the market daily. Misperception wedge = respondent's guess of the share of local merchants who value digital payments minus the actual share from the listing exercise, in percentage points (N = 1,119; 70 respondents declined to guess). Under-estimator = 1 if the wedge is negative. Treat reports the p -value from a regression of the covariate on pooled treatment assignment; TypeTreat reports the p -value from a joint test of the three arm indicators. Standard errors clustered at the market level. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.

2 Attrition

2.1 Merchant

Table 1: Merchant attrition between baseline and follow-up

	(1) Eq. 3	(2) Eq. 4	(3) Eq. 5
Treated (pooled)	-0.006 (0.014)		
Information pooled (T1+T2)		-0.003 (0.015)	
Incentive (T3)		-0.013 (0.017)	-0.013 (0.017)
Two-sided info (T1)			-0.012 (0.017)
Coordinated info (T2)			0.006 (0.018)
Specification	Pooled	Info + Incentive	By arm
N	1,192	1,192	1,192
Centered R^2	0.000	0.000	0.001

Notes: Dependent variable = 1 if the merchant did not complete the follow-up survey. Columns report regressions of this indicator on: an indicator for assignment to any treatment arm (Eq. 3), indicators for the pooled information arms (T1 and T2) and the incentive arm (T3) (Eq. 4), and separate indicators for T1 (two-sided information), T2 (coordinated information), and T3 (financial incentive) (Eq. 5). The control group is the omitted category throughout. All specifications include randomization block fixed effects. Standard errors, clustered at the market level, in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.

2.2 Household

Table 2: Household attrition between baseline and follow-up

	(1) Eq. 3	(2) Eq. 4	(3) Eq. 5
Treated (pooled)	0.045*** (0.017)		
Information pooled (T1+T2)		0.040** (0.018)	
Incentive (T3)		0.055** (0.022)	0.055** (0.022)
Two-sided info (T1)			0.022 (0.021)
Coordinated info (T2)			0.057*** (0.022)
Specification	Pooled	Info + Incentive	By arm
N	1,189	1,189	1,189
Centered R ²	0.005	0.005	0.007

Notes: Dependent variable = 1 if the household did not complete the follow-up survey. Columns report regressions of this indicator on: an indicator for assignment to any treatment arm (Eq. 3), indicators for the pooled information arms (T1 and T2) and the incentive arm (T3) (Eq. 4), and separate indicators for T1 (two-sided information), T2 (coordinated information), and T3 (financial incentive) (Eq. 5). The control group is the omitted category throughout. All specifications include randomization block fixed effects. Standard errors, clustered at the market level, in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.

3 Merchant Main Results: Outcome Family 1 (Digital Uptake and Usage)

3.1 Pooled treatment [Eq. (3)]

	(1) Ranks digital>cash	(2) Proportion suppliers digital	(3) Any digital customer payment	(4) Number of digital transactions	(5) Proportion of customers digital
Treated (pooled)	0.032 (0.030)	0.896 (2.025)	0.009 (0.017)	-0.458 (2.825)	-1.289 (1.447)
<i>q</i> -val. (Treated)	1.000	0.823	0.934	0.823	0.934
Control group mean	0.300	37.322	0.936	31.339	26.664
ANCOVA	Yes	Yes	No	No	No
N	1,114	1,114	1,114	1,114	1,114
Centered R ²	0.008	0.195	0.000	0.000	0.001

Notes: Each column reports a separate regression of the dependent variable named in the column header on an indicator for assignment to any treatment arm. The control group is the omitted category. All regressions include randomization block fixed effects. ANCOVA = Yes indicates that the baseline value of the outcome is included as a control. *q*-values are Benjamini-Hochberg sharpened *q*-values computed within the outcome family. Standard errors, clustered at the market level, in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.

3.2 Information vs. Incentive [Eq. (4)]

	(1) Ranks digital>cash	(2) Proportion suppliers digital	(3) Any digital customer payment	(4) Number of digital transactions	(5) Proportion of customers digital
Information pooled (T1+T2)	0.049 (0.031)	2.401 (2.151)	0.022 (0.018)	1.561 (2.973)	-0.116 (1.490)
Incentive (T3)	0.001 (0.037)	-2.099 (2.491)	-0.016 (0.022)	-4.471 (3.534)	-3.619* (1.871)
<i>q</i> -val. (Info.)	0.610	0.441	0.538	0.441	0.750
<i>q</i> -val. (Incentive)	0.569	0.515	0.569	0.267	0.267
Control group mean	0.300	37.322	0.936	31.339	26.664
ANCOVA	Yes	Yes	No	No	No
N	1,114	1,114	1,114	1,114	1,114
Centered R ²	0.011	0.198	0.005	0.006	0.006

Notes: Each column reports a separate regression of the dependent variable named in the column header on indicators for assignment to the pooled information arms (T1 and T2) and the financial incentive arm (T3). The control group is the omitted category. All regressions include randomization block fixed effects. ANCOVA = Yes indicates that the baseline value of the outcome is included as a control. *q*-values are Benjamini-Hochberg sharpened *q*-values computed within the outcome family. Standard errors, clustered at the market level, in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.

3.3 By arm [Eq. (5)]

	(1) Ranks digital>cash	(2) Proportion suppliers digital	(3) Any digital customer payment	(4) Number of digital transactions	(5) Proportion of customers digital
Two-sided info (T1)	0.078** (0.036)	2.096 (2.545)	0.045** (0.018)	4.141 (3.393)	0.089 (1.689)
Coordinated info (T2)	0.020 (0.035)	2.699 (2.470)	-0.001 (0.021)	-0.960 (3.380)	-0.317 (1.677)
Incentive (T3)	0.001 (0.037)	-2.100 (2.491)	-0.016 (0.022)	-4.462 (3.533)	-3.618* (1.870)
<i>q</i> -val. (T1)	0.075	0.371	0.078	0.075	0.513
<i>q</i> -val. (T2)	1.000	1.000	0.980	1.000	1.000
<i>q</i> -val. (T3)	0.572	0.517	0.572	0.267	0.267
Control group mean	0.300	37.322	0.936	31.339	26.664
ANCOVA	Yes	Yes	No	No	No
N	1,114	1,114	1,114	1,114	1,114
Centered R ²	0.013	0.198	0.010	0.009	0.006

Notes: Each column reports a separate regression of the dependent variable named in the column header on indicators for assignment to T1 (two-sided information), T2 (coordinated information), and T3 (financial incentive). The control group is the omitted category. All regressions include randomization block fixed effects. ANCOVA = Yes indicates that the baseline value of the outcome is included as a control. *q*-values are Benjamini-Hochberg sharpened *q*-values computed within the outcome family. Standard errors, clustered at the market level, in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.

4 Merchant Main Results: Outcome Family 2 (Business Outcomes)

4.1 Pooled treatment [Eq. (3)]

	(1) Number of customers	(2) Average revenue (PKR)	(3) Number of employees
Treated (pooled)	3.028 (4.570)	-218.031* (127.191)	-0.115 (0.074)
<i>q</i> -val. (Treated)	0.183	0.260	0.183
Control group mean	38.509	1557.915	1.159
ANCOVA	Yes	Yes	Yes
N	1,114	1,114	1,111
Centered R ²	0.100	0.418	0.478

Notes: Each column reports a separate regression of the dependent variable named in the column header on an indicator for assignment to any treatment arm. The control group is the omitted category. All regressions include randomization block fixed effects. ANCOVA = Yes indicates that the baseline value of the outcome is included as a control. *q*-values are Benjamini-Hochberg sharpened *q*-values computed within the outcome family. Standard errors, clustered at the market level, in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.

4.2 Information vs. Incentive [Eq. (4)]

	(1) Number of customers	(2) Average revenue (PKR)	(3) Number of employees
Information pooled (T1+T2)	6.112 (5.112)	-251.374* (133.506)	-0.086 (0.078)
Incentive (T3)	-3.100 (5.042)	-151.437 (152.704)	-0.174** (0.085)
<i>q</i> -val. (Info.)	0.180	0.180	0.274
<i>q</i> -val. (Incentive)	0.482	0.125	0.125
Control group mean	38.509	1557.915	1.159
ANCOVA	Yes	Yes	Yes
N	1,114	1,114	1,111
Centered R ²	0.102	0.418	0.479

Notes: Each column reports a separate regression of the dependent variable named in the column header on indicators for assignment to the pooled information arms (T1 and T2) and the financial incentive arm (T3). The control group is the omitted category. All regressions include randomization block fixed effects. ANCOVA = Yes indicates that the baseline value of the outcome is included as a control. *q*-values are Benjamini-Hochberg sharpened *q*-values computed within the outcome family. Standard errors, clustered at the market level, in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.

4.3 By arm [Eq. (5)]

	(1) Number of customers	(2) Average revenue (PKR)	(3) Number of employees
Two-sided info (T1)	2.161 (4.485)	-140.547 (145.930)	-0.054 (0.093)
Coordinated info (T2)	9.970 (7.378)	-360.021** (154.358)	-0.117 (0.083)
Incentive (T3)	-3.114 (5.042)	-149.805 (152.494)	-0.174** (0.085)
<i>q</i> -val. (T1)	0.630	1.000	0.849
<i>q</i> -val. (T2)	0.177	0.060	0.060

12 Household Main Outcomes: Lee (2009) Bounds

Household respondents in the Coordinated information arm (T2) and the Financial incentive arm (T3) were significantly less likely to attrite between baseline and follow-up, meaning the endline sample for those arms is positively selected. Per Section 4 of the pre-analysis plan, we report Lee (2009) bounds for all outcomes in Household Family 1. Bounds are estimated separately for each treatment arm against the control group using leebounds (Tauchmann 2014). T1 (Two-sided information) is included for completeness; the merchant sample shows no differential attrition.

Table 3: Lee (2009) Bounds for Household Main Outcomes (Family 1)

	T1: Two-sided info		T2: Coordinated info		T3: Financial incentive	
	Lower	Upper	Lower	Upper	Lower	Upper
Ranks digital > cash	-0.049 (0.041)	-0.029 (0.043)	0.069 (0.043)	0.130 (0.046)	0.058 (0.043)	0.114 (0.046)

Notes: Lee (2009) bounds on the ITT effect of each treatment arm on the household outcome named in the row, estimated separately for each arm vs. control to account for differential attrition. Standard errors (delta method) in parentheses.

13 Departures from the pre-specified plan

This document records all pre-specified analyses that were committed to in the registered pre-analysis plan (AEA RCT Registry #16529) but could not be executed as planned. Each departure is described along with the reason and how it was handled.

Departure 1: Merchant Gender Heterogeneity

PAP commitment. Section 4 of the PAP pre-specified exploratory heterogeneity analyses for merchant respondents, including heterogeneity by *respondent gender*.

Why this analysis was not conducted. During data cleaning we found that the merchant sample is essentially all-male: fewer than 1% of surveyed merchants in our three Punjab districts (Okara, Bahawalnagar, Muzaffargarh) are female. This is consistent with ethnographic evidence that retail market-stall ownership in peri-urban Punjab is overwhelmingly male. With near-zero variance in the moderator, a heterogeneity regression cannot estimate meaningful differential effects.

How handled. No heterogeneity table by merchant gender is reported. All other pre-specified merchant heterogeneity analyses (education, sector, loose-change requirement, smartphone access, prior negative experience, tax exposure, customer cash-preference belief, and the misperception wedge) are run as specified. Household gender heterogeneity is unaffected and is reported in Section 8 of this appendix.

Departure 2: Communication Summary Index

PAP commitment. Hypotheses H5 and H6 in the PAP refer to treatment effects on “communication outcomes and the communication index.”

Why this analysis was not conducted. The PAP does not specify the exact construction of a summary index for communication outcomes. Rather than introduce an arbitrary aggregation rule post-hoc, we report all individual communication outcomes (Merchant Family 3; Household Family 2) separately. This provides more transparent and interpretable results.

How handled. All individual communication outcomes are reported in Section 5 (merchant) and Section 8 (household) of this appendix. Readers can assess H5 and H6 directly from the pattern of coefficients across these outcomes.
